

ZURU

# ZURU AI Integration Internship Task 2025

# Task Overview

## Your Mission

- Build an AI-augmented system for hiring excellence (AI prompting, information tracking, workflow etc.)
- Extract comprehensive requirements from hiring managers
- Enable consistent, fair candidate evaluation
- Maintain human judgment in the hiring process

# Current State and Pain Points

## The Problem We're Solving

- Hiring managers take 2-3 meetings (1-2 hours total) to articulate role requirements
- 40% of JDs require major revisions after posting
- TA team spends 5 minutes per application on initial screening
- 25% of candidates who pass screening fail basic role requirements in first interviews
- Inconsistent evaluation against ZURU DNA values across different screeners
- Critical information about "must-haves" vs "nice-to-haves" often surfaces late in the process

# Part 1: Discovery & System Design

Deliverable: A system architecture document containing:

1. Information Extraction Framework
  - List 8-10 key questions your AI system would ask hiring managers
  - Show how you'd handle vague responses ("I need someone good with people")
  - Design for capturing both technical skills and cultural fit requirements
2. Risk Assessment Matrix
  - Identify 5 potential biases in automated screening
  - Mitigation strategies for each risk
  - Human checkpoint recommendations
3. Process Flow Diagram showing:
  - Current hiring workflow pain points
  - Your proposed AI-augmented workflow

# Part 2: Prototype Development

Deliverable: A functional prototype/system demonstrating

## 1. Hiring Manager Interview System. An interactive tool that:

- Starts with basic role information
- Asks intelligent follow-up questions based on responses
- Extracts hidden requirements through conversational AI
- Handles these scenarios:
  - Technical role (e.g., "AI Integration Intern")
  - Creative role (e.g., "Brand Designer")
  - Uses different questioning strategies for each

## 2. JD Generation & Screening System Your system must output:

- Formatted job description matching ZURU's style
- 5-7 role-specific screening questions
- Evaluation rubric for TA team
- "Red flags" and "green flags" for quick candidate assessment
- Integration points with ZURU DNA values

## 3. Candidate Evaluation Assistant Create a proof-of-concept that:

- Scores candidate responses against extracted requirements
- Provides confidence levels (not just pass/fail)
- Suggests areas for human review

# Test Scenario

## Real-World Example

Hiring Manager Input: *"We need a Marketing Intern for summer. They should be creative and good with social media. Maybe some design skills? They'll work with the team on TikTok stuff and help with campaigns. Should be fun to work with."*

### Your Task:

- Gather all required information in easy to use efficient manner
- Transform this into comprehensive requirements
- Generate professional JD
- Create screening criteria

### Your System Must Handle:

- Vague Executive
  - "I need a superstar who can do a bit of everything"
- Over-Technical Manager
  - Lists 47 required skills for entry-level role
- Cultural Fit Focused
  - "Skills can be taught, I need someone who gets our vibe"

# Part 3: Implementation & Integration

## Final Deliverables

1. Documentation & Code:
  - Complete solution repository/developed system info
  - Basic Technical documentation
2. 45-Minute Task Review Call:
  - 10 min: TA team presentation (demo, metrics, rollout)
  - 10 min: AI team technical deep-dive
  - 20-25 min: Q&A session

# Bonus Challenges (Optional)

- Create a "hiring manager readiness score" that predicts how well-defined their requirements are
- Build in seasonality awareness (summer interns vs. permanent roles)
- Show how the system learns from successful vs. unsuccessful hires
- Demonstrate multi-language capability for global roles
- Add a feature that identifies when a role might be better split into two positions

# Evaluation Criteria

## What We're Looking For

1. Understanding of Hiring Complexity: Do you grasp the nuance beyond just automation?
2. Conversational AI Design: How naturally does your system extract information?
3. Practical Implementation: Would busy hiring managers actually use this?
4. Quality of Output: Are the JDs and questions genuinely useful?
5. Balance: How well do you balance automation with human judgment?
6. Reflection on Performance and possible future improvements.

# Key Constraints

- System must work for roles from interns to senior executives
- Consider ZURU's global presence (legal requirements vary by country)
- Peak hiring: summer internship program processes 500+ applications in 2 weeks
- Hiring managers have maximum 30 minutes for initial requirement gathering
- TA team members have varying technical competence

# Resources Provided

## What You'll Receive

- Task Descriptions and Requirements (This Document)
- ZURU DNA values and culture guide (1-pager)
- 2 example job descriptions

# Important Reminders

- Detailed mockups acceptable if full development isn't possible
- Document failed approaches and lessons learned
- Consider hiring manager disagreement scenarios
- Balance automation with human oversight
- Focus on practical, usable solutions

Show us how AI  
can revolutionise  
talent acquisition at  
ZURU!
